Initial Setting

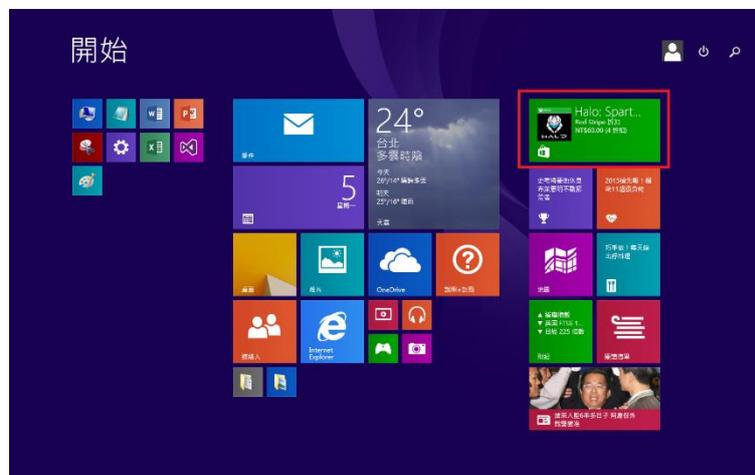

PowerNAS uses the apps in the Windows 8.1 PowerNAS Center store to let you easily perform initial setup. You only need to follow the instructions with a click of your mouse.

Downloading and Installing PowerNAS Center

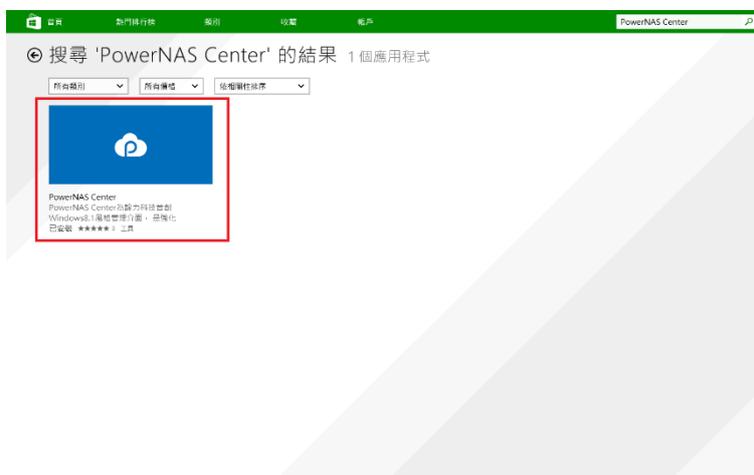

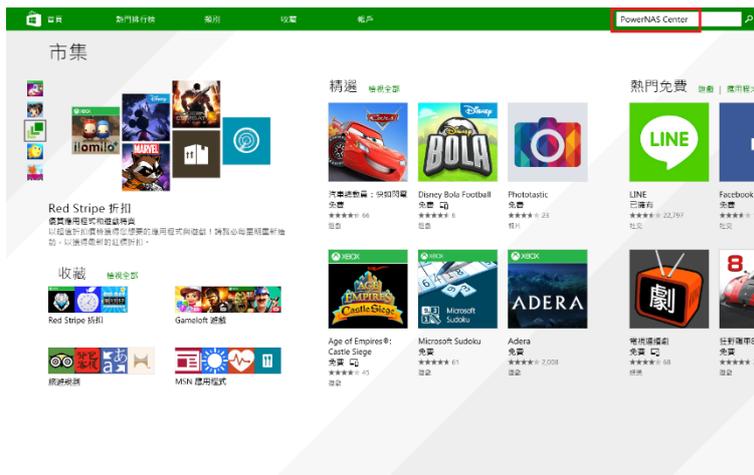

Before starting to use “PowerNAS Center”, you must acquire the ”PowerNAS Center” app on Windows 8.1. Then please follow the instructions to install it step by step.

First, you have to go into the “Store” on Windows 8.1 by clicking on

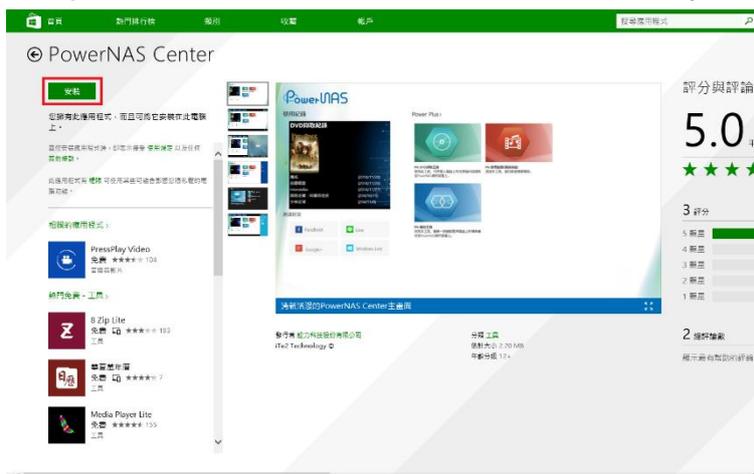

the ”Start”  → ”Store”  (The system defaults are a green base with a white shopping bag design) at the lower left corner.

After accessing the Store, enter “PowerNAS Center” in the search bar, otherwise you won’t be able to find your specific PowerNAS apps among the various apps in the Store.

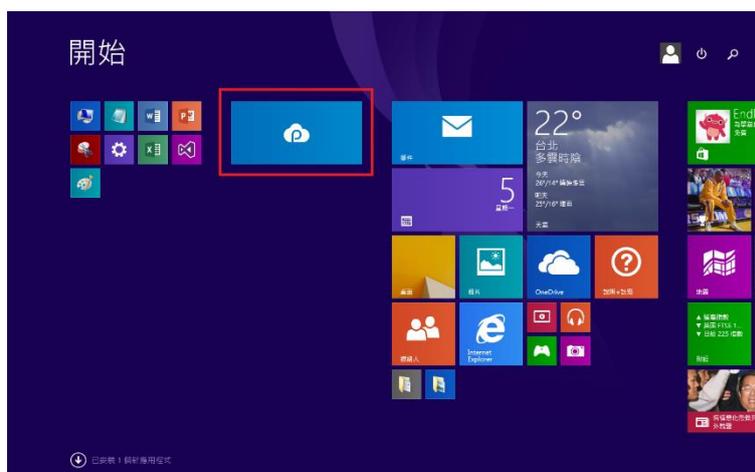

After clicking into the apps installing page, select “Install” and then wait for the computer to acquire “PowerNAS Center” from the Store for you automatically.

Next, a prompt at the upper right corner on the screen will inform you that the app has been completely installed. Please return to your app store to find the PowerNAS Center. We suggest you to put it up on the start page. Now you

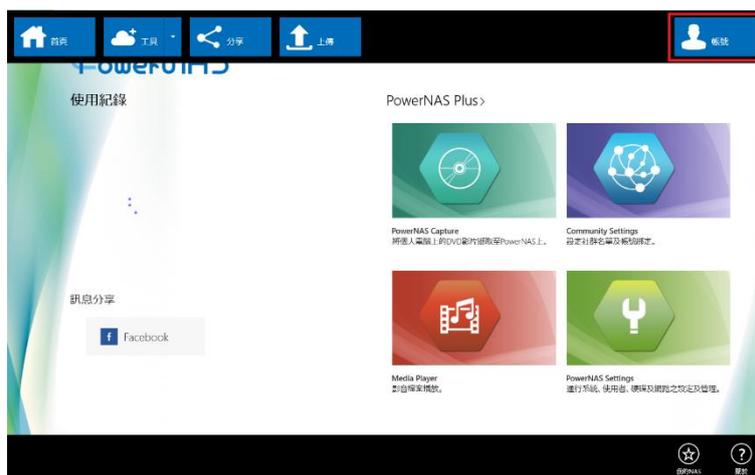

can start to use our powerful PowerNAS !

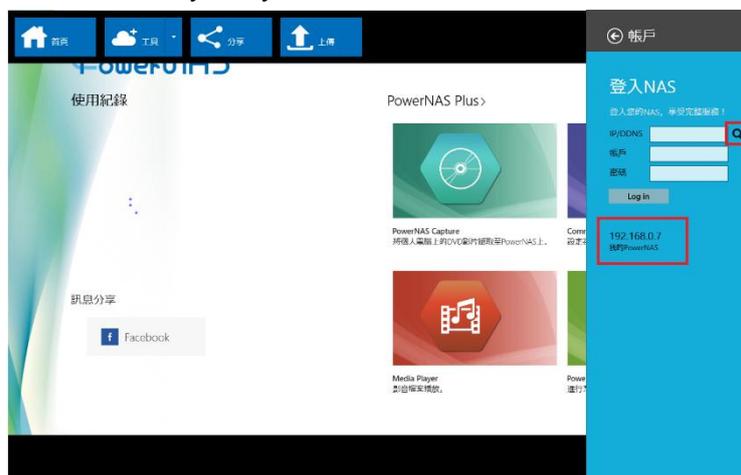

Connecting to PowerNAS Host

Initial Access PowerNAS

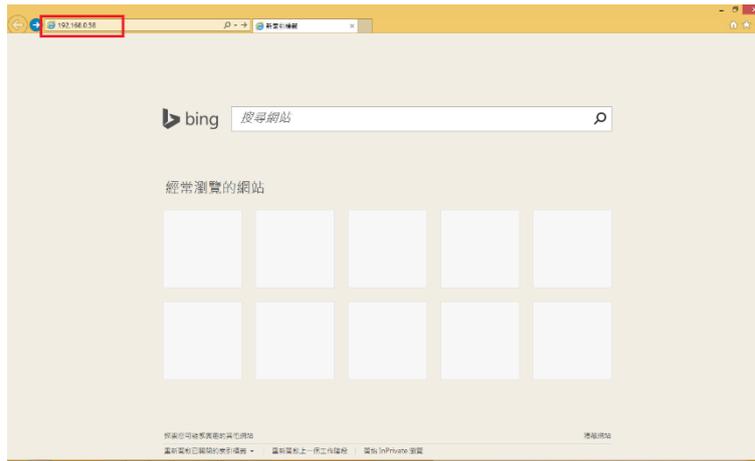

When you open the “PowerNAS Center” the first time, you must initiate a connection with PowerNAS. Then you can completely enjoy all the additional functions. First we must get your PowerNAS IP address shared by your home router. Then the first-time-use settings can be made after accessing PowerNAS. Please point anywhere on the homepage screen and right-click. Next, click on the “Account” button.

Click on the magnifier “” to let the system scan the PowerNAS host in your home local network directly for you.

After scanning the PowerNAS host in your home and getting the IP address, please open the web browser (IE, Google Chrome or Fire Fox) and access the PowerNAS host IP address obtained previously by scanning into the web address bar. Press the ENTER key to access the PowerNAS page.

Then you will see a first use PowerNAS page. Please follow the instructions on the page to setup your PowerNAS step by step

Modifying the Host Name and User Name

When you access your PowerNAS PDM webpage for the first time, PowerNAS will request you provide a new name and replace the system default

administrator password. To do this, just press the edit icon “” for naming PowerNAS and modifying the password. After completing this, click on “OK, next step”.

Setting Up Hard Drive Format

After you finish setup of host name and administrator password, the system will guide you to the hard drive setup page.

In the initialization setup for PowerNAS hardware, there are two modes for you to choose from: **Quick/Simple Installation** and **User Customized Installation**. When using **Quick/Simple Installation**, you don't have to worry about making choices. If you are an advanced user, you can select **User Customized Installation** to let you build a PowerNAS meeting your personal needs more.

Quick/Simple Installation

When you select quick/simple installation, there are two possibilities, as follows

If your PowerNAS just contains three hard drives or fewer, directly press the "Start to Use" button. The system will start to format your hard drives.

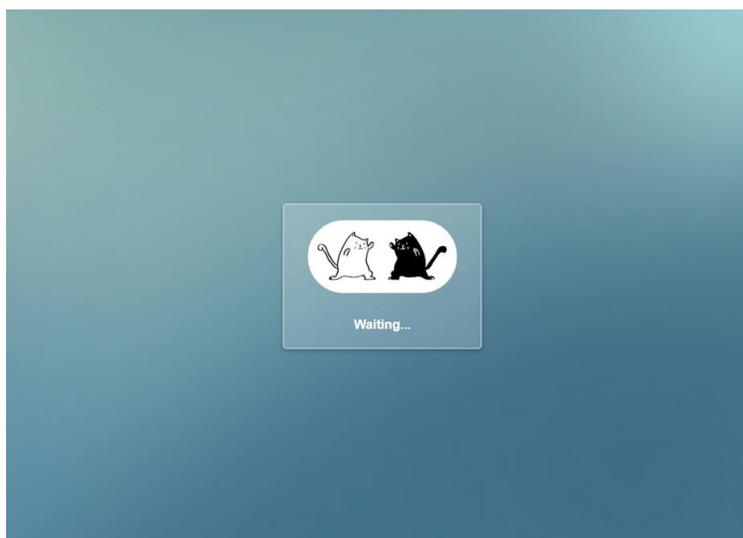

If your PowerNAS contains four hard drives, the system provides two options for your selection: Normal Safety and High Safety respectively. The following table allows you to easily understand the advantages and disadvantages of each and then make your decision.

	Normal Safety	High Safety
Available Capacity	Large	Small
Safety	Worse	Better

After selection, the word “Waiting” will appear on the screen. After completion, the system is logged-out. You just need to login again.

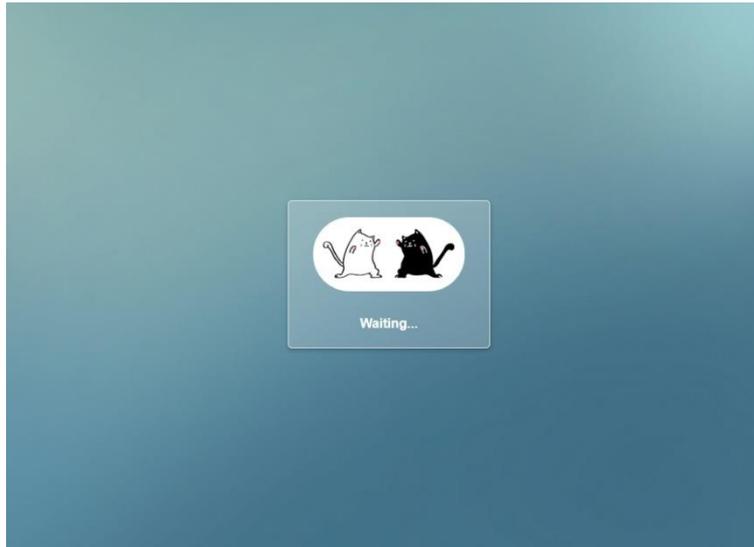

User Customized Installation

When you select the **User Customized Installation**, the system will detect the current number of installed hard drives in the PowerNAS. If there are four hard drives, it will provide you three options of driver formatting at most, Raid 0/5/10 respectively. You can decide which driver matrix will be used as you like.

After selection, the word “Waiting” will appear on the screen. After completion, the system is logged-out. You just need to login again.

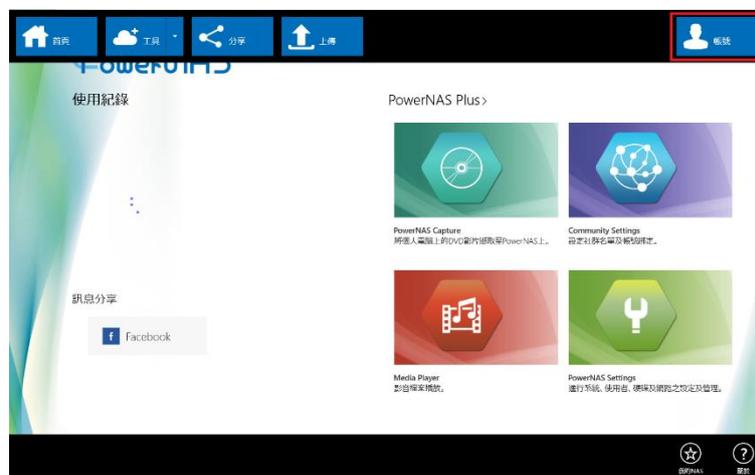

Login to Account and Creating Connection

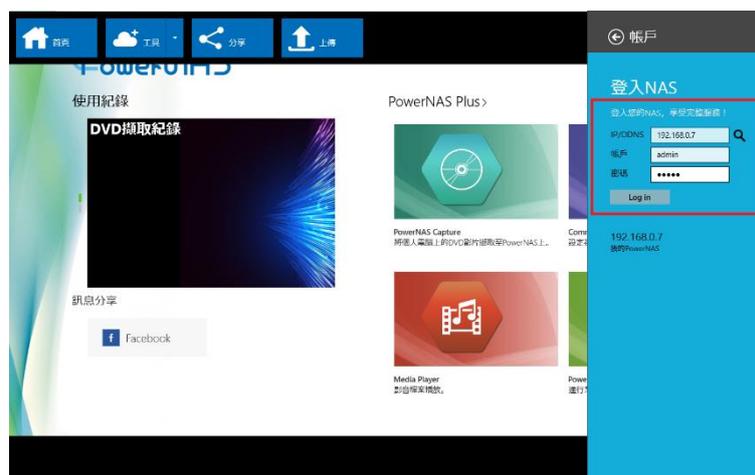

Congratulations ! Your first-use setup of PowerNAS is complete. Next, you can login to the PowerNAS Center to start enjoying the various convenient functions of PowerNAS.

First of all, please right click anywhere on the homepage screen. Then click on

the “Account” button .

Enter the IP address of PowerNAS just set up by you. (Or click on the magnifier “” and then select your PowerNAS from the scanning result)Next, enter the user account and password just set up, click on “” to login. The connection between your computer and PowerNAS is complete.

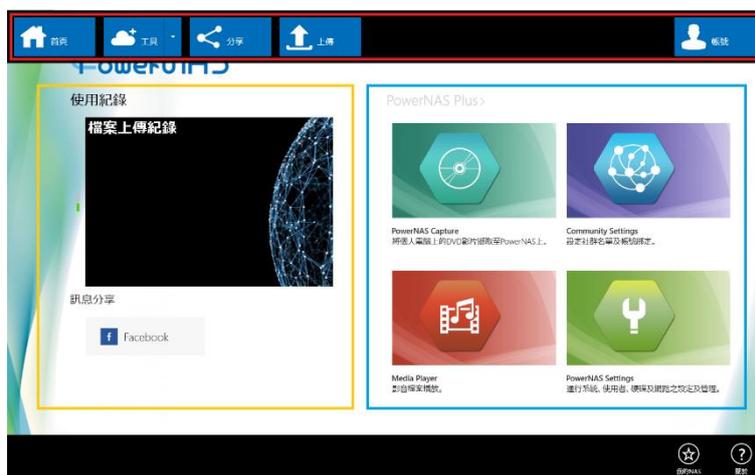

How to Use PowerNAS Center

Via the “PowerNAS Center” operating interface on Windows 8.1, your PowerNAS can reach many convenient and fun functions. In the next paragraph, the method of use of each function will be introduced.

Function Overview

First of all, we introduce the main screen of “PowerNAS Center”. On the main page, the parts you can see are only the yellow clock and the blue block. If you want to call out the red block and green block, you just need to right click anywhere on the screen. Then these function bars will appear on the upper and lower sides.

Main Function List

Home Page 首頁

After you click on the homepage, it will connect you to the homepage of PowerNAS PDM which has more functions for your use. If you want to further understand the related functions on the PDM, please refer to the [PowerNAS PDM User Manual](#).

Tools 工具

You can access the PowerNAS Plus now. However, we put three PowerNAS app tool shortcuts of PowerNAS Plus into the blue frame area directly for you. Therefore, if you want to use these apps, we suggest you use them directly from the main screen ! The use of these functions will be introduced in detail later, in [App Tools](#).

Share 分享

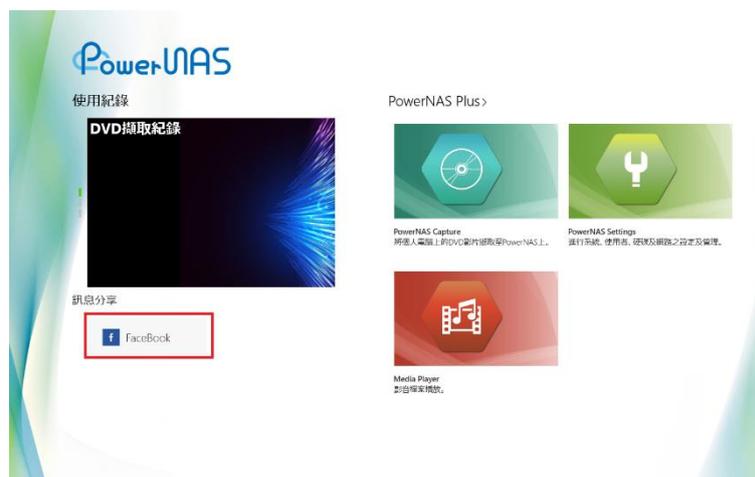

This function can share your PowerNAS space, a screenshot or the downloaded links of “PowerNAS Center” with your relatives or friends via E-mail. Select one item on the drop-down menu for sharing. After selection, press the “Send E-mail”. Just by writing an email to your relatives or friends,

you can share items with them easily!

It is worth mentioning that, under the Share function, we have the Wall function for posting onto the community website. You can post your daily feelings and even invitations to the Wall of your community website via this app.

First, click on the “Facebook” button below “Info Share” on the main screen.

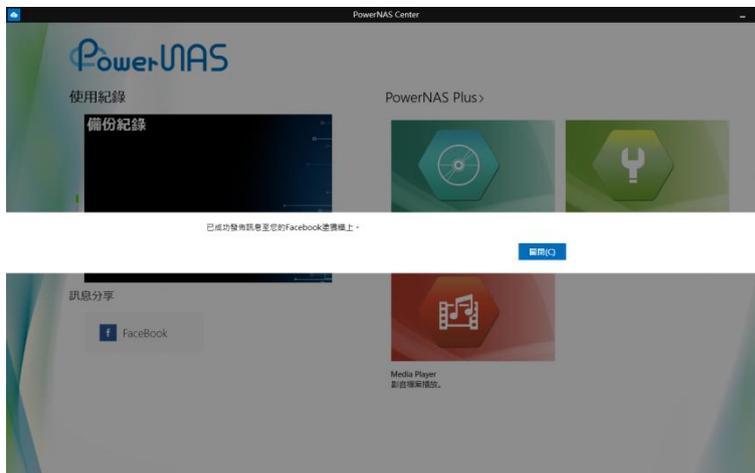

A text block will appear with a small input zone. You can enter your daily notes, feelings, etc. into that zone, just like your usual use of a community website.

If it is your first share, you must go via the login binding service on your community website. Enter your community website account password, then agree to PowerNAS using your share permission and accessing your public info. After your agreement, you can post your shared content out!

Next, the system will inform you your post is completed.

Thereafter, you can see your shares on the community website!

Upload 上傳

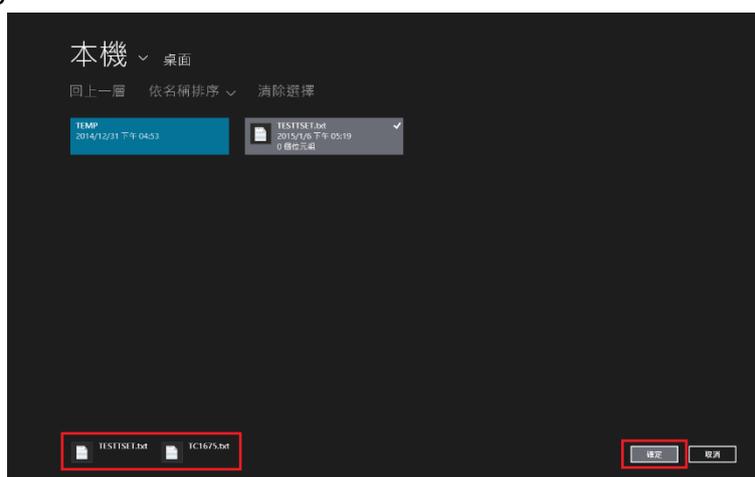

This Upload function can let you put shared files which you want to store in PowerNAS or share with friends into the PowerNAS space provided to any shared persons for their use.

After accessing the Upload, first select the location of the uploaded file in the drop-down menu at the upper left corner. Normally, the user will select the uploaded file at "Local Computer".

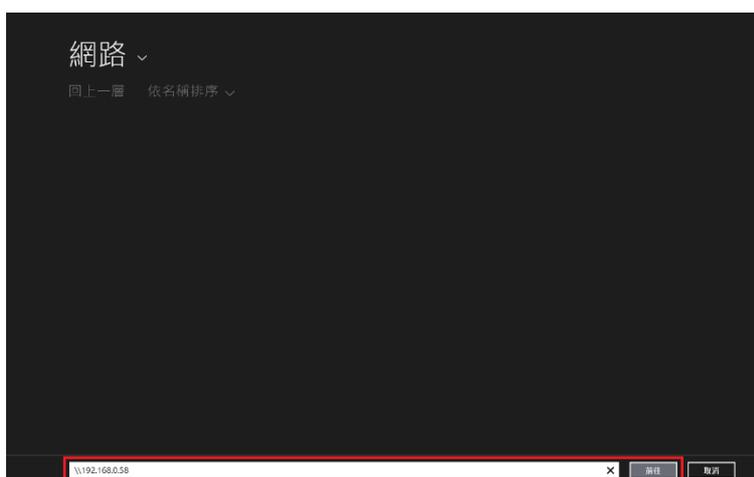

Next step: select the current folder. After you find and then click on the file, a small preview of the uploading file will appear in the lower left corner.(you can select multiple files!) After selection of all the files you want, press “Confirm” in the lower right corner.

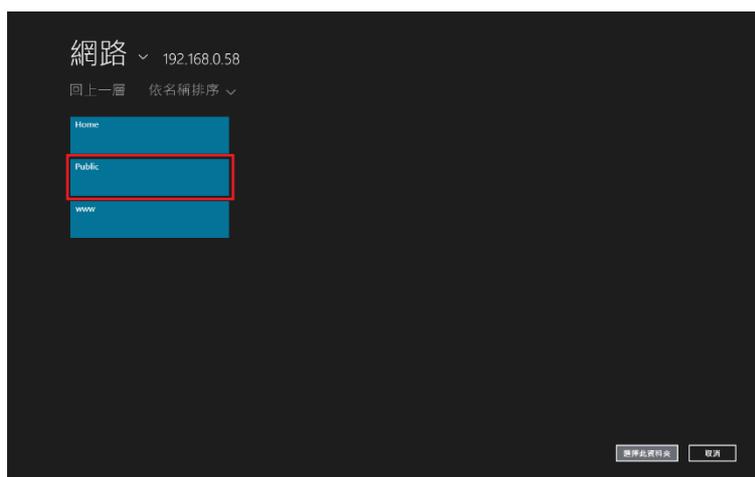

After confirmation, the screen will bounce back to the same screen as in file upload except the lower right corner will be changed to “Select this Folder”. This means now you are going to select where to put your upload file on PowerNAS.

Similar to the selection of upload file, first please select the PowerNAS location to be uploaded. Select “Web” in the drop-down menu. Then enter “\\your PowerNAS IP address” inside the text entering box at bottom. Next step: click on “Go To”.

After accessing your PowerNAS space, you can start to select the uploading destination folder you like. Here we demonstrate how to upload a file to a public: click on “Public”.

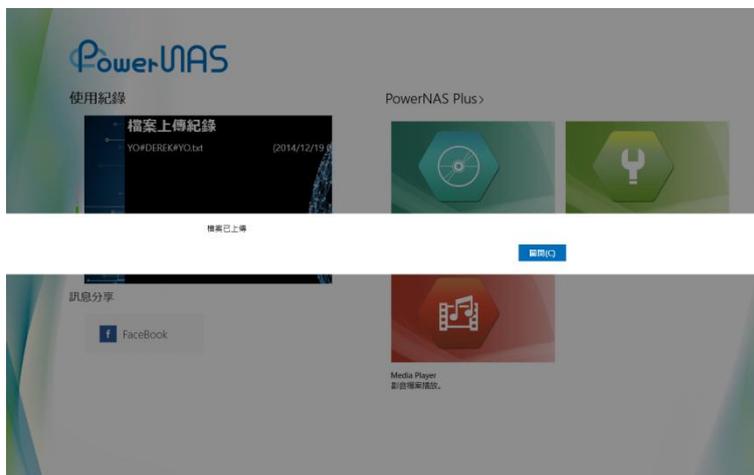

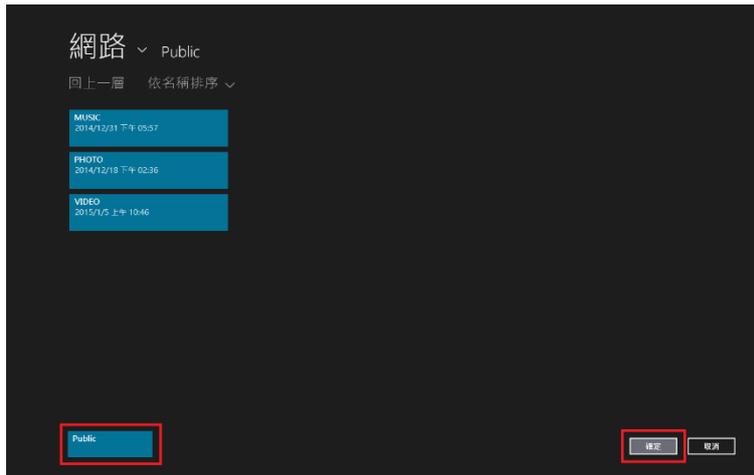

After accessing the “public” folder, click on the lower right “Select This Folder”.

(if you want to save it under a subfolder, you just need to re-access the subfolder to re-click on “Select this Folder”.) Now the selected folder will appear in the lower left corner. (However you cannot select multiple subfolders as select a folder !) After confirmation with no error, press “Confirm”. Then wait for the system to return to homepage. When the file uploaded prompt appears, uploading is completed.

小提醒：若是想要從 PowerNAS 上面，將儲存的檔案抓回到本機的話，只要反向操作就可以囉！

Account 帳號

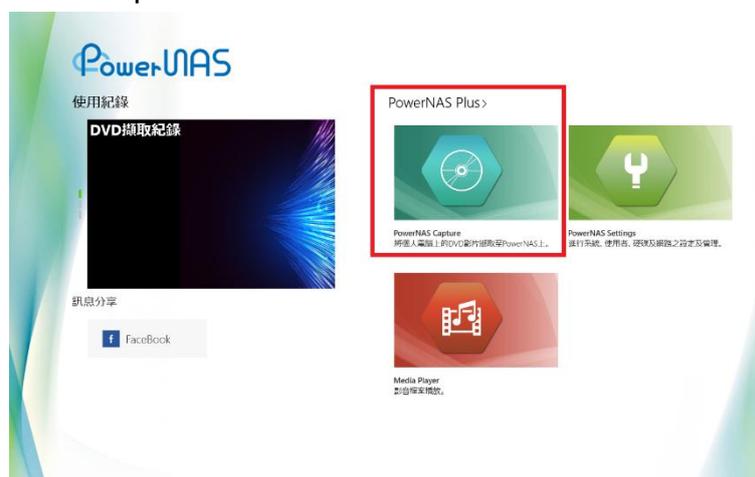

Before login, this provides you the function of logging in to PowerNAS. If you have been logged in, it will show your current account, PowerNAS host and the logout button. As you press the logout button, the system will log your PowerNAS Center out from the connected PowerNAS host. Now you can use another account to login to the same host, or you can even change to another host to login.

App Tools

PowerNAS Capture

“PowerNAS Capture” has the ability to capture the videos in your DVD discs and store them in the app tools in PowerNAS space. Thus, when you want to recollect them at any time, you can directly enjoy the conserved videos in the space via XMBC Play. It is really very convenient! Now let us demonstrate the procedure of DVD capture.

On the main screen, you can directly find the “PowerNAS Capture” option. Click to go into the guiding page. If you are using this function for the first time and have not yet installed “PowerNAS Capture” gadgets, then, as you press the Start button, the system will guide you to the PowerNAS official website. It will request you first download the installation file for the “PowerNAS Capture”

gadget.

After installation, click on the "PowerNAS Capture" app shortcut on the Window desktop to open it. Put the DVD disc into DVD ROM. Then select your DVD ROM location from the drop down menu. Next, select the stored path where your DVD capture is to be stored. If you check the "PowerNAS" directly, after completion of capture, your video will be put in the "Public > Video > DVD Capture" folder of PowerNAS. If don't want to store the video in this path, you can check the "Local Computer" option by pressing the "Browse" to select your preferred path in "Local Computer". Otherwise you can enter "錯誤! 超連結參照不正確。Storage path" by yourself. In this way, you can store video in paths other than PowerNAS space.

小提醒：若是 PowerNAS 管理者賦予您的帳號權限不足，可能會有部份路徑是無法儲存的，請多加留意！

Now the DVD capture is ongoing. After completion, you can find the DVD capture in the stored target folder. In the future, you won't have to painstakingly find the DVD disc and put it into a computer or DVD player to watch the capture!

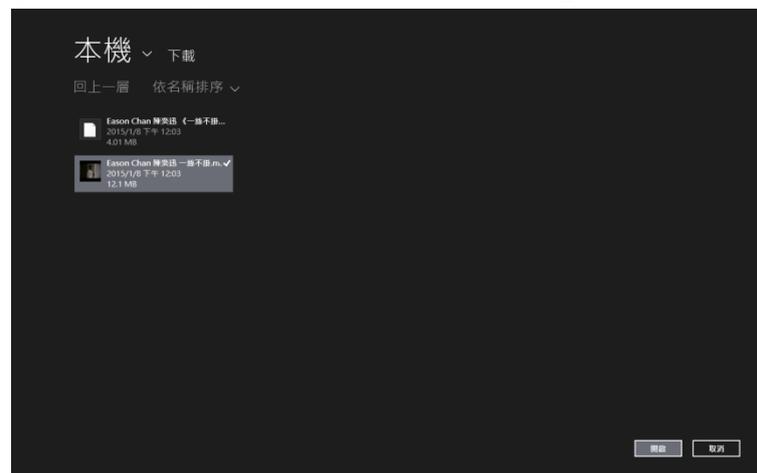

小提醒：若您的光碟片有防燒錄的功能，那麼該片 DVD 的內容將無法被 PowerNAS Capture 擷取，請多加注意哦！

Media Player

Via the AV Player function in **Media Player**, you don't have to use the XMBC. Alternatively, enjoy the video on "Local Computer" directly, which is stored on your computer or on PowerNAS space. First, by the same way, you can go into the guiding page via the **Media Player** on the main screen. Then, click on "Open".

After accessing the path selection screen, use the same operating method as for **Upload**. After finding out the video or music file to be enjoyed, select that file and then press the "Open" button in the lower right corner.

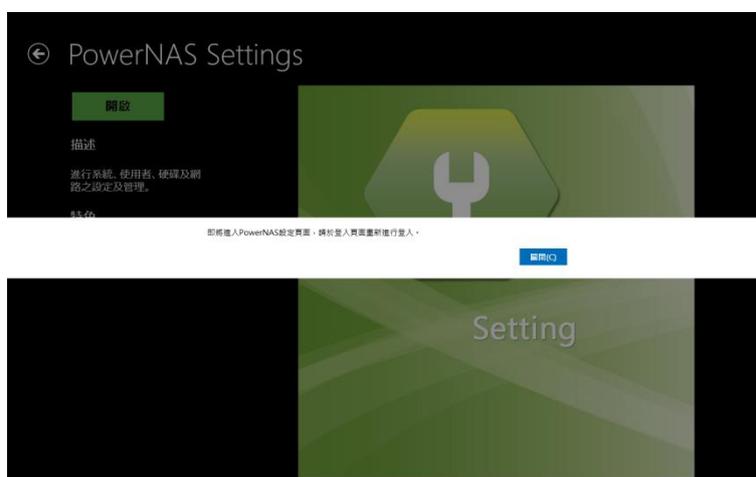

After pressing the "Open" button, it will start to play directly. During playing, the operation is similar to usual playing software. You can easily do basic operations such as play/pause, skip, volume up/down and full screen by using a mouse only. If you still feel these operations cannot satisfy your requirements, please right click to get more options

PowerNAS Settings

The major purpose of this PowerNAS Settings is to guide the user to go into the PDM webpage in PowerNAS via page to perform further settings. First of all, follow the same procedure to go into the “PowerNAS Settings” page via the main page. Then press “Open”. The system will remind you that you will go into the PowerNAS webpage. You must login again on this webpage. Next, you will go into the login page in PDM. For details on settings, please refer to the [PowerNAS PDM Webpage User Manual](#).

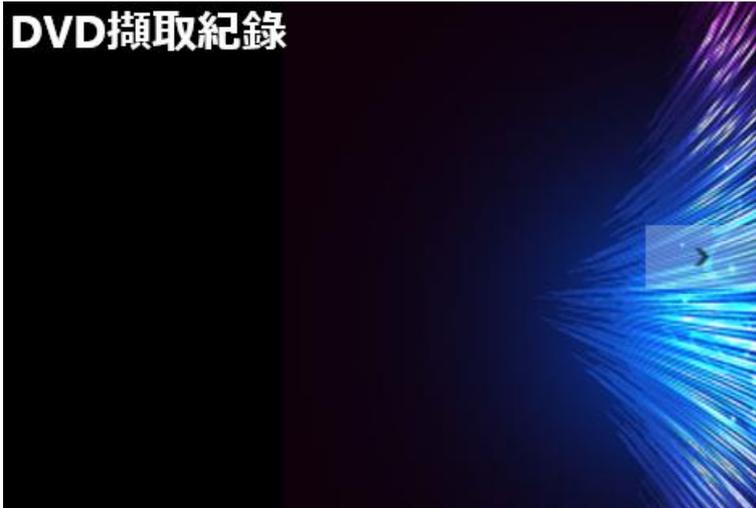

Record of Use

DVD Capture Record, Backup Record and File

Upload Record

There is a very special function on the main screen of PowerNAS Center. It can let you clearly see a record of recent file management of this PowerNAS. All the DVD captures, backups or uploaded files done by you or your permitted friends will be recorded in this block. This allows easy management by you or the administrator of this PowerNAS.

A screenshot of a software interface titled "檔案上傳紀錄" (File Upload Log). The background is dark with a glowing blue network sphere or globe on the right side. The interface displays a list of file names and their corresponding upload timestamps in a two-column format.

Related Info

As you press the right button on the main screen, not only will the main function list appear at the top, but some messages or system controls about this PowerNAS will appear at the bottom of the screen.

After you access “ My NAS” , it will show your system info and current system status. There are three operating buttons related to the PowerNAS system: “Restart”, “System Shutdown” and “System Reset”.

The content in “About” majorly has your PowerNAS version number and a “Check & Update” button. When the updated firmware version of your PowerNAS system is available, the button can perform firmware updates for your PowerNAS system and keep it in best status!
